

# Business Intelligence Portfolio – [Emmanuel Yufenyuy]

Master's Student | Business Intelligence – IU International University  
tar.yufenyuy@gmail.com | [LinkedIn](#)

This repository consolidates all the components of my end-to-end Business Intelligence portfolio, built to demonstrate the implementation of a possible **Extract-Load-Transform and Analyse** Architecture in an organizational context. The key components of this architecture are: data integration, transformation & modeling, and storytelling. It also highlights of automating the entire process.

The process to be implemented is shown on the following image!.

## Projects Overview

Phase	Title	Description
1	<a href="#">Integration</a>	Data integration from Yelp API, Google Drive, and Hetzner stoarge-box into PostgreSQL.
2	<a href="#">Transform &amp; Modeling</a>	getdbt models transforming raw data into analytics-ready tables.
3	<a href="#">Dashboard</a>	Power BI dashboard analyzing Local Bakery Production & sales data, adn Yelp Businesses with their reviews.
	<a href="#">Research and Course Summaries</a>	Summaries & reports from BI-related master's courses.
